

How to Use BlackBoard AI Design Assistant to Generate Questions

1 First, we will click on the 'plus' sign and click 'Create' to create a new test.

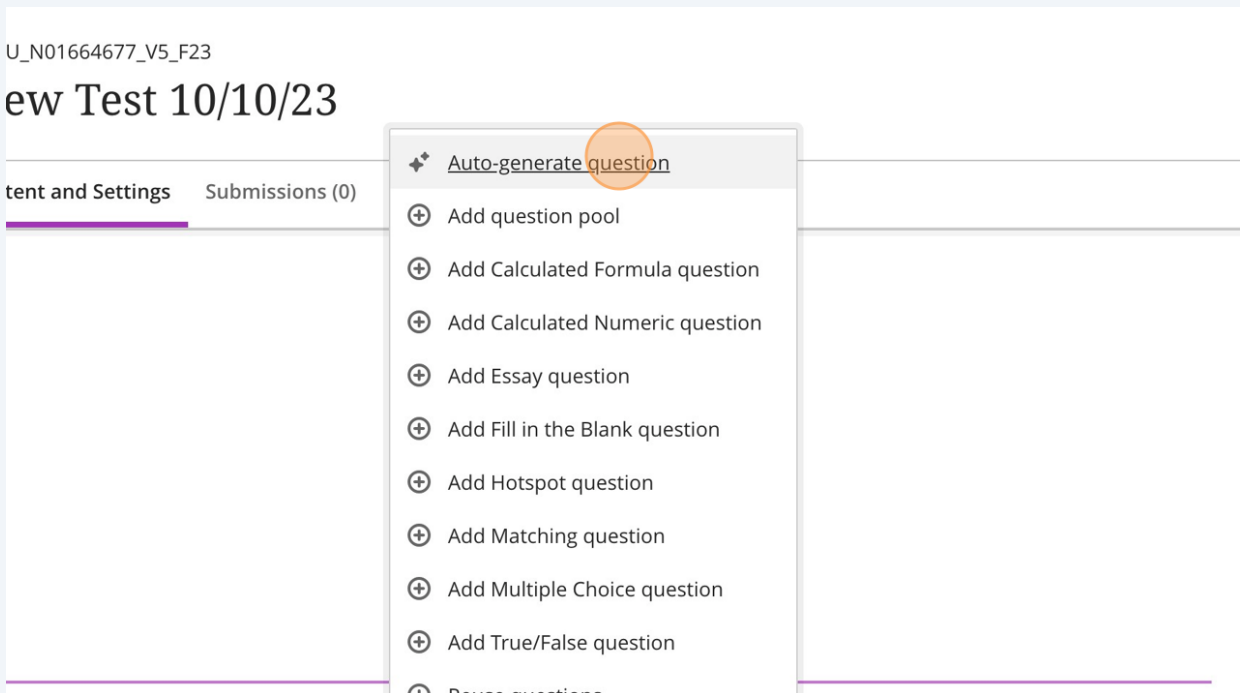

The screenshot shows a BlackBoard course content area. At the top, there is a section titled "Cell Structure and Function" with a "Hidden from students" status. Below it, a paragraph of text describes the week's topics. A plus sign (+) is visible above a horizontal line. A context menu is open, listing several options: "Create" (highlighted with an orange circle), "Auto-Generate Modules", "Copy Content", "Upload", "Cloud Storage", "Content Market", and "Content Collection". Below the menu, another section titled "Genetics and Heredity" is visible, also marked as "Hidden from students".

2 Once the sidebar opens, scroll down and click on "Test" to create your new test.

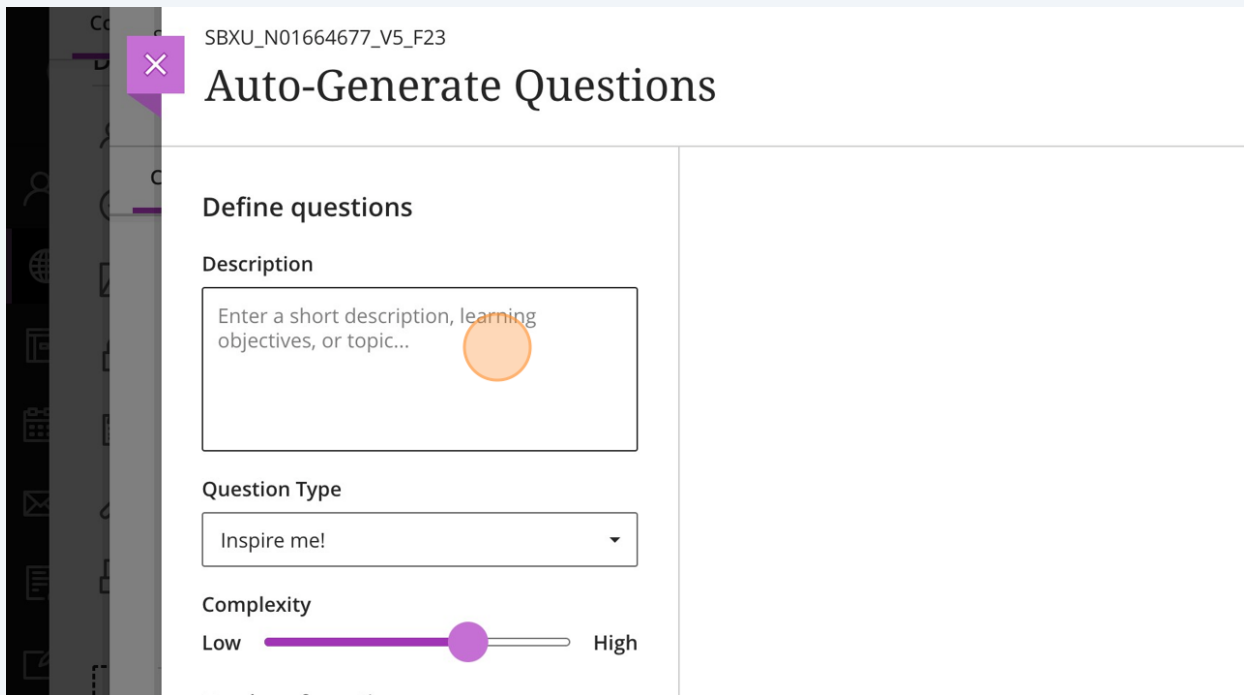

3 Click on the 'plus' to bring up this menu. Click on "Auto-generate question" to start using this AI Design Assistant Tool.

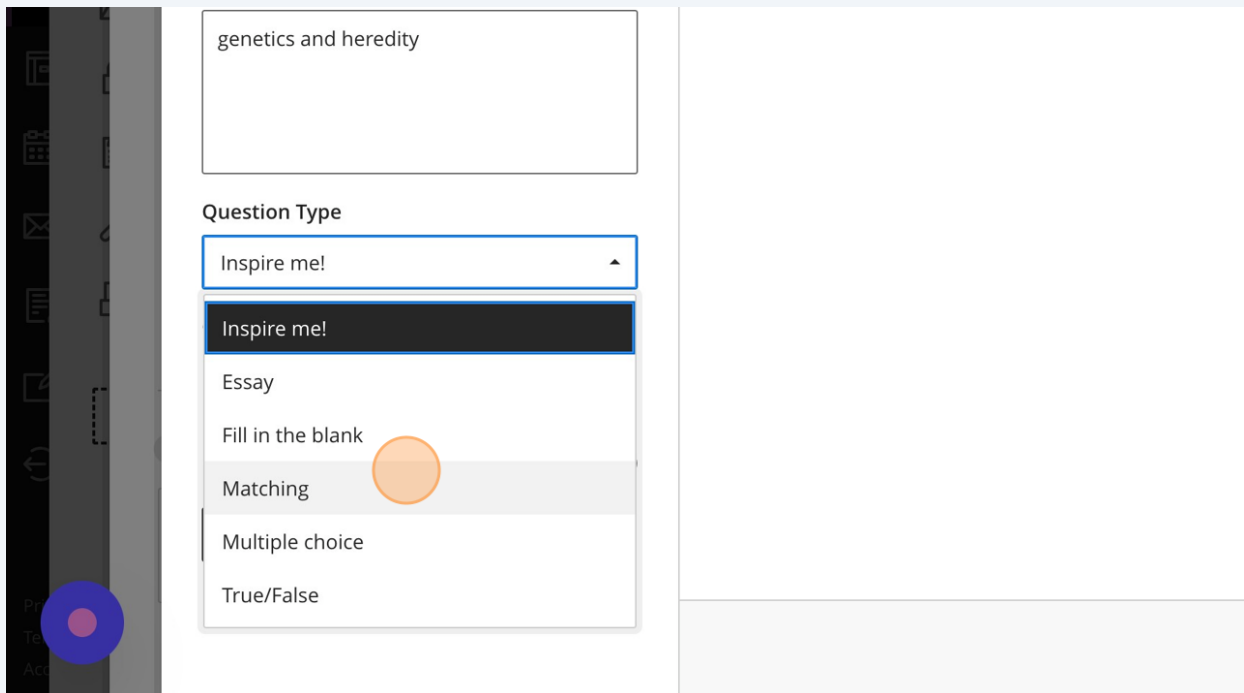

4

Click on the "Description" field, and enter your key words or ideas to help the AI Design Assistant to generate questions.

5

There are a variety of question types to choose from. Under 'Question Type', click on 'Inspire Me!' to get this drop down menu. You may click on any of the 6 options to generate questions of that type.

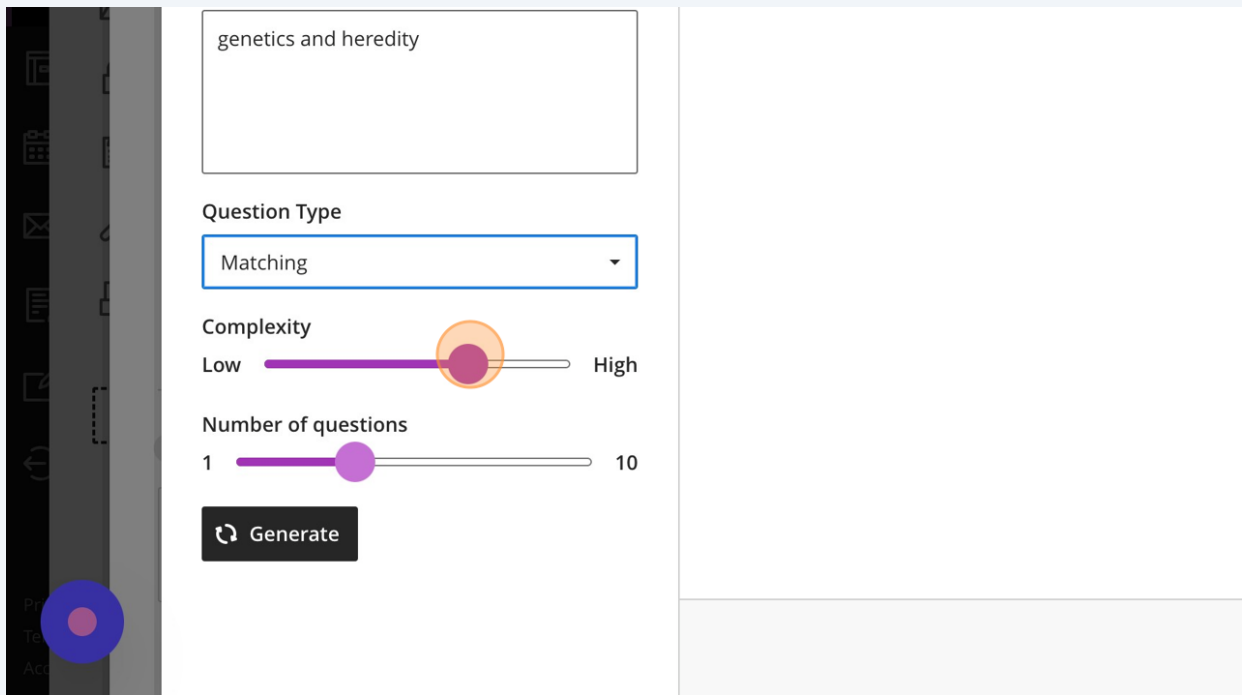

Tip!

The 'Inspire me!' question type creates a combination of all of the other kinds of question types. This may be useful for creating a wider variety of questions for a quiz or test in a shorter amount of time.

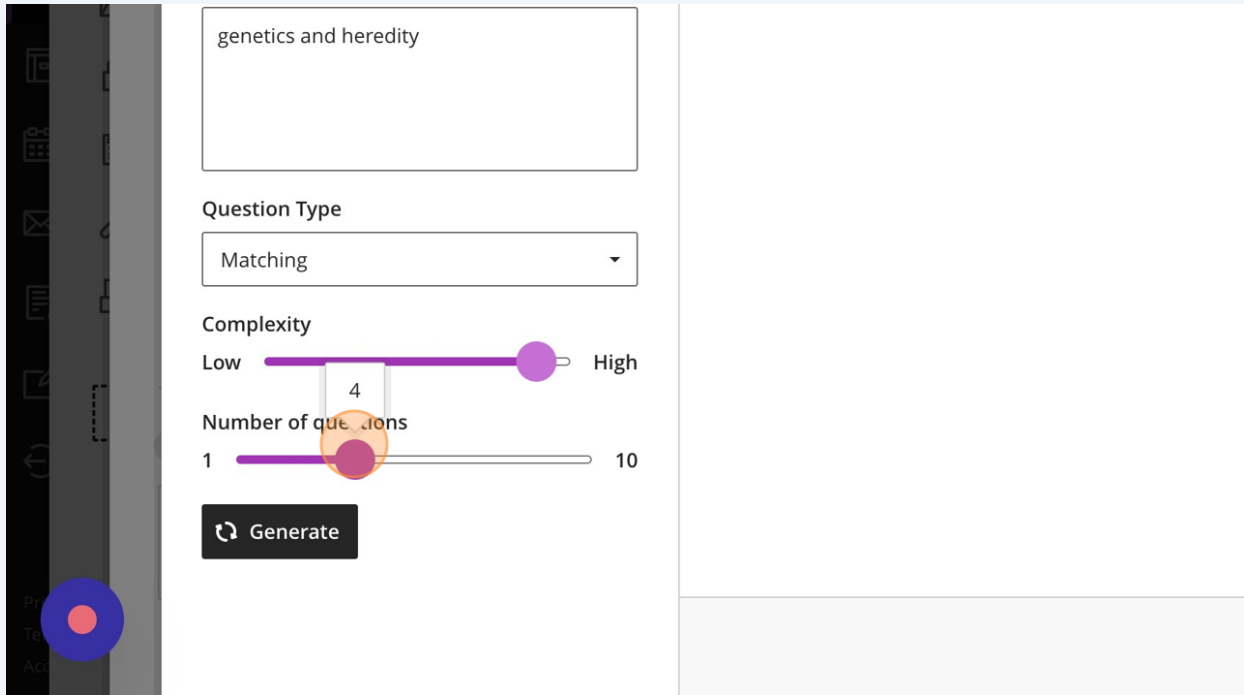

6

You can change the complexity of the questions generated by the AI Design Assistant by moving the slider under the heading 'Complexity' between the 'Low' and 'High' options.

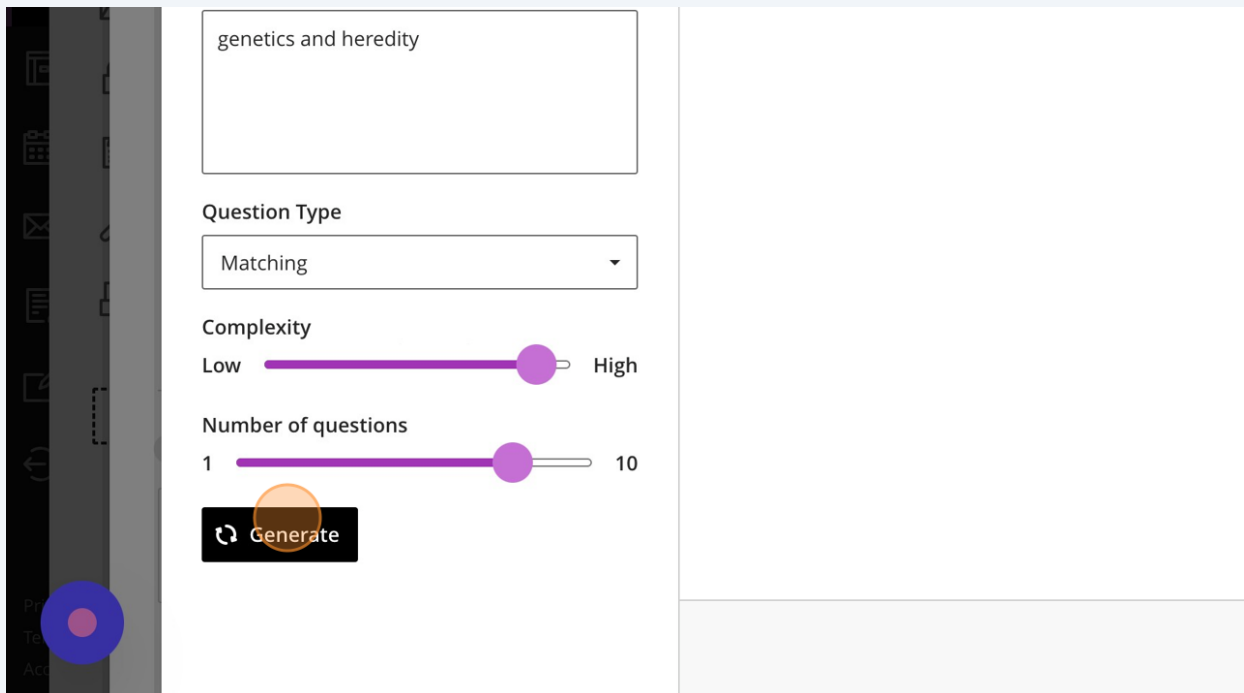

7

You can change the number of generated questions from between 1 to 10 using the slider under the heading 'Number of questions'.

8

Once you have typed in your prompt, selected the type of question you would like, as well as the number of questions and their complexity, click "Generate" to generate the questions with the AI Design Assistant.

Alert!

It may take a few tries to generate questions using the AI Design Assistant. Please be aware this is a known issue.

9

When the questions are generated, you may select the questions you would like to add by pressing on the checkbox beside the question.

Question 1

This is auto-generated content and needs to be checked for accuracy

Match each term with its correct definition:

	Prompts	Answers
1.	Trait	
2.	Inheritance	
3.	Allele	

Tip!

Make sure to review these questions. There is a chance that the AI Design Assistant 'hallucinates' and provides incorrect or partially correct information, so make sure to edit these errors if need be.

10

Once you have selected the questions you would like to include in your test, at the bottom of the page, you will find the 'Add to Assessment' button. Click on it.

	Prompts	Answers
1.	Genetics	The study of genes and heredity
2.	Heredity	Passing of traits from parents to offspring
3.	Chromosome	A thread-like structure in cells that contains genetic information
4.	Mutation	A change in the DNA sequence that may alter the phenotype
	Distractors	Mutation

11

Congratulations! You have added questions generated by the AI Design Assistant into a new test!
