

FORMULAE & TABLES FOR STAT 1115 MIDTERM EXAM

$$\text{Sample mean: } \bar{x} = \frac{\sum_{i=1}^n x_i}{n}, \quad \text{Sample standard deviation: } s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}.$$

Empirical Rule: 68%: $\bar{x} \pm s$, 95%: $\bar{x} \pm 2s$, 99.7%: $\bar{x} \pm 3s$.

$$\text{Value of specific percentile (P}_k\text{)} \quad L_p = (n+1) \frac{p}{100}$$

If L is an integer (whole number), the value of percentile P_p is at the location L_p , counting from the lowest.

If L is not an integer (decimal number), then interpolate between the integer portion of L_p and the next value.

Box plot: min, Q_1 , median, Q_3 , Max.

$$\text{Probability: } P(\text{event}) = \frac{\text{The number of required outcomes}}{\text{The total number of possible outcomes}}, \quad 0 \leq P(\text{event}) \leq 1$$

$$P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$$

$$P(A \text{ or } B) = P(A) + P(B) \text{ for mutually exclusive events}$$

$$P(A \text{ and } B) = P(A) P(B) \text{ if } A \text{ and } B \text{ are independent}$$

$$P(A \text{ and } B) = P(A) P(B|A) \text{ if } A \text{ and } B \text{ are dependent}$$

$$\text{Conditional probability} \quad P(B|A) = \frac{P(A \text{ and } B)}{P(A)}$$

Normal Distribution:

Use $Z = \frac{x - \mu}{\sigma}$ to convert the **non-standard** normal distribution to **standard** normal distribution.

Solve for x : $x = (z \times \sigma) + \mu$.

Regression equation: $\hat{y} = b_0 + b_1 x$
