Waste Sorting

Humber College is tackling waste management head-on with a new, student-driven waste and recycling program. In 2020, after noticing confusion around the existing red, blue, and yellow bins, Humber's Office of Sustainability partnered with students to design a smarter system.

User Experience (UX) Design students studied how people interact with the bins, while Public Relations students developed a communications plan to educate the campus community. The result? New bins with clear, easy-to-read signage, making it easier to sort waste correctly. A pilot project is already underway at North Campus, with Lakeshore set to follow soon. Small changes, big impact! Learn more [here](#)!
